Education

Panjab University

Aug 2023 – May 2027

Bachelor of Engineering (B.E.) in Computer Science

- GPA: 7.92/10.0
- Coursework: Data Structures & Algorithms, OOP, Operating Systems, DBMS.

Experience

Data Science Intern

Dec 2025 – Jan 2026

Evoastra Ventures Inc.

- Built modular data processing pipelines in Python to transform raw datasets into validated features, reducing pipeline failures by 30% and enabling consistent model training across iterations.
- Introduced schema validation and automated null-checking across data pipelines, decreasing data-related training errors and reducing manual debugging effort during model development.

Achievements

- Leetcode: Knight (Max Rating: 1699), Top 13% globally.
- Global Rank 1905/21121 (Top 9.1%) at Leetcode Biweekly contest 181.
- Solved 250+ DSA problems across various platforms.

Technical Skills

- Programming Languages: C++, Python, JavaScript.
- Backend: FastAPI, Rest APIs.
- Databases: PostgreSQL, MySQL, Redis.
- Libraries & Frameworks: Pandas, NumPy, Scikit-learn.
- Systems: Caching, Rate Limiting, API Design
- Tools: Git, Docker, Jupyter Notebook.

Projects

Scalable URL Shortener — FastAPI, PostgreSQL, Redis, JWT

[repo](#) [↗](#)

- Designed and developed a scalable URL shortening service using FastAPI, PostgreSQL, Redis, and JWT authentication, implementing Clean Architecture, repository pattern, URL expiration, and click analytics.
- Engineered a caching layer with Redis for URL resolution and built an analytics pipeline to track click events, visitor statistics, referrer information, and URL performance metrics.

Quant-Track — Python, FastAPI, SQLAlchemy

[repo](#) [↗](#)

- Built a full-stack trading journal and analytics platform using FastAPI, React, SQLAlchemy, and JWT authentication, enabling trade tracking, performance analysis, and strategy management.
- Integrated machine learning and NLP-based analysis pipelines to generate trading insights from historical trade records and journal entries, including sentiment and behavioral pattern analysis.

Job Recommendation Service — Python, FastAPI, NLP

[repo](#) [↗](#)

- Developed an AI-powered job recommendation platform using FastAPI, PostgreSQL, Sentence Transformers, and JWT authentication for resume management and personalized job matching.
- Implemented semantic similarity-based recommendation workflows using transformer embeddings and vector similarity scoring to rank jobs based on resume relevance and skill alignment.
